dax—scooter - is a new phenomenon that developed from our keen interest in exercising and having fun with energetic dogs.

Dog Scootering is a growing sport in the UK, with a large network of followers but the size of many 'Sled-dog Rigs' can cause problems for storage and transportation.

To combat these issues and open the sport up to the weekend enthusiast we've developed a lightweight, compact alternative.

dax—scooter - is an innovative, professional design was developed primarily for dog-scootering. The frame folds allowing for easy transportation and storage.

- Folding Frame with Damper.
- Quick release Brush-Bow.
- Quick release Wheels.
- Fork and frame suspension.
- Precision engineered aluminium alloy frame, clear lacquered.
- Adjustable height Handle bars.
- Efficient brakes.
- Standard components allowing for personal customisation.
- 14.6kg weight – the lightest folding scooter on the market.
- Guaranteed against 'frame fault' for the lifetime of the original owner.
- 100% Recyclable product - DO NOT
